

Practical No. 3

To use pre-built and user defined modules in Node.js Application.

Problem Statement 1:

1. With the help of suitable examples use following Node.js pre-built modules in Node.js Application.
 - a. File System Module (fs)
 - b. Secure HTTP Module (https)
 - c. Nodemailer Module (nodemailer)
 - i. Install this module from npm

Problem Statement 2:

1. Create a user defined module and use it in Node.js Application that uses HTTP server.
